

Grounding base folding 150cm

Product code: Inne.Uziom.ANKOM.01

The foldable grounding stake with a 150 cm base is an innovative solution in the field of vertical grounding, enabling efficient and quick installation of grounding systems.

Product description

The foldable grounding stake with a 150 cm base is an innovative solution in the field of vertical grounding, enabling efficient and quick installation of grounding systems. The main features of this grounding stake are: High functionality: The 150 cm wide base provides stable support for the entire structure, allowing it to be securely driven into the ground. Adjustable length versatility: The 150 cm extension length allows flexible adaptation of the stake length to the specific requirements of the project. Cross-shaped joint: The cross-shaped joint ensures a solid connection between the base and the extension, providing stability to the entire structure even in challenging terrain. Driving tool: The driving tool facilitates the insertion of the stake into the ground, increasing convenience and efficiency during installation work. Two connectors: Two connectors enable swift and safe installation of additional grounding elements, which is essential for the construction of complex grounding systems. Innovative connection: The base end equipped with a properly profiled cone allows for quick and stable connection to the next grounding element, namely the extension. Furthermore, this connection features excellent electrical conductivity, which is crucial for ensuring effective grounding. Thanks to these features, the foldable grounding stake with a 150 cm base provides a reliable

solution that meets the highest standards of safety and efficiency in electrical grounding installations.
