Product description

The SolarEdge SEHAZB-DR-SWITCH-2 relay is a wireless, intelligent load control device that ensures maximum self-consumption. The SolarEdge relay allows SolarEdge users with a heat pump with a digital control input to signal the availability of surplus energy generated by the PV system, allowing the heat pump to serve as a thermal energy storage system. Advantages of the SolarEdge SEHAZB-DR-SWITCH-2 relay: Wireless intelligent power switch for controlling electrical devices Device control can be done remotely, according to a pre-configured schedule, or dynamically by the inverter to maximize consumption Built-in energy and power consumption measurement Allows measurements up to 3 kW Specification of the SolarEdge SEHAZB-DR-SWITCH-2 relay: 2 potential-free switching contacts Control of heat pumps Dimensions: L: 70 mm W: 25 mm H: 110 mm Weight: 0.1 kg
