

## SolarEdge CELL-B-R0-GLO-V-S0 plugin LTE/GSM + antenna (SetApp)

Product code: AF.inne.solaredge.08

SolarEdge CELL-B-R0-GLO-V-S0 is an LTE/GSM module with an antenna (SetApp), designed for both residential and commercial inverters. The LTE Plug-In enables wireless communication between the inverter and the SolarEdge monitoring server. The plug-in can be directly mounted in the SolarEdge inverter and connected to an external antenna. This simplifies the communication setup, resulting in time savings during installation.

### Product description

SolarEdge CELL-B-R0-GLO-V-S0 is an LTE/GSM module with an antenna (SetApp), designed for both residential and commercial inverters. The LTE Plug-In enables wireless communication between the inverter and the SolarEdge monitoring server. The plug-in can be directly mounted in the SolarEdge inverter and connected to an external antenna. This simplifies the communication setup, resulting in time savings during installation. Advantages of SolarEdge CELL-B-R0-GLO-V-S0: Enables remote analysis and issue resolution Supports high-throughput monitoring of inverters, optimizers, batteries, meters, and weather stations Wirelessly connects SolarEdge inverters to the internet No on-site internet infrastructure required Can be mounted either in the external inverter enclosure or in the communication gateway Compatible with inverters supporting SetApp
