

SolarEdge SECT-SPL-250A-A Curr.Transf. 250A

Product code: AF.przekladnik.solaredge.06

An innovative solution for photovoltaic installations is the SolarEdge Split-Core Current Transformer 250A. Thanks to it, precise monitoring and control of current flow in the system are possible, enabling optimization of its operation and increased efficiency. The SolarEdge SECT-SPL-250A-A current transformer. Its key advantage is ease of installation - thanks to the division of the core into two parts, there is no need to interrupt the electrical circuit or shut down the entire installation. Simply open the clamp and mount the transformer directly on the cable or DIN rail. Additionally, thanks to the split-core technology, it is possible to quickly and precisely measure current intensity even in the case of tightly arranged cables or pipes. The device also has galvanic isolation, which protects against equipment damage and improves safety of use. In summary, the SolarEdge Split-Core Current Transformer 250A is a reliable and easy-to-install device that enables precise measurement of current intensity in photovoltaic installations, allowing optimization of system operation and increased efficiency.

Product description

An innovative solution for photovoltaic installations is the SolarEdge Split-Core Current Transformer 250A. Thanks to it, precise monitoring and control of current flow in the system are possible, enabling optimization of its operation and increased efficiency. The SolarEdge SECT-SPL-250A-A current transformer. Its key advantage is ease of installation - thanks to the division of the core into two parts, there is no need to interrupt the electrical circuit or shut down the

entire installation. Simply open the clamp and mount the transformer directly on the cable or DIN rail. Additionally, thanks to the split-core technology, it is possible to quickly and precisely measure current intensity even in the case of tightly arranged cables or pipes. The device also has galvanic isolation, which protects against equipment damage and improves safety of use. In summary, the SolarEdge Split-Core Current Transformer 250A is a reliable and easy-to-install device that enables precise measurement of current intensity in photovoltaic installations, allowing optimization of system operation and increased efficiency. Technical specifications: SolarEdge SECT-SPL-250A-A Current Transformer, 250A Nominal current: 250 A Internal dimension: 24 x 25 mm External dimension: 46.2 x 65.4 mm The length of all crossed pairs of current transformer wires is 2.4 m.
