

Grounding washers A2 type A

Product code: K.40x40.30

The contact washer, also known as grounding plate A2 type A, is a mounting component used in photovoltaic installations. Its main function is to equalize potentials between the frame, structure, and photovoltaic panels, thereby ensuring continuity of galvanic connections throughout the solar installation.

Product description

The contact washer, also known as grounding plate A2 type A, is a mounting component used in photovoltaic installations. Its main function is to equalize potentials between the frame, structure, and photovoltaic panels, thereby ensuring continuity of galvanic connections throughout the solar installation. Specification: Height: 6 mm Width: 40 mm Length: 40 mm Material: Stainless steel A2 The contact washer is made of stainless steel, ensuring resistance to corrosion and providing uninterrupted operation for many years. Proper installation of photovoltaic panels on the roof requires the use of a set of components perfectly matched to the specific structure. The selection of mounting elements depends on the type of roof where the panels will be installed. Additionally, for pitched roofs, the selection of elements also considers the type of roofing material.
