

The grounding conductor clamp (AI)

Product code: K.40x40.32

The grounding conductor clamp (AI) is a component used in electrical installations to securely and effectively connect the grounding conductor to other elements of the installation. Typically made of metal such as copper or aluminum, it provides durability as well as good electrical conductivity. This clamp ensures a secure and stable connection between the grounding conductor and the grounding point or other grounding elements, which is crucial for the electrical safety of the installation. Its design allows for easy installation and removal when servicing or repairing the grounding system is necessary.
