### Product description

The Pylontech US Series (48V) Cable set is an essential component for the efficient connection of the Pylontech USxxxxC battery or battery bank with an inverter charger. This high-quality cable set ensures a reliable connection, enabling optimal operation of the renewable energy system. Specially designed for Pylontech US series batteries, the cable set includes everything needed for seamless connection. It consists of two 2-meter cables: orange and black, with a 20mm copper core featuring Radlok™ technology, facilitating eyelet termination. Additionally, the set includes an RJ45 communication cable and an RJ45 connecting cable, both 3 meters long. Made from high-quality materials, these cables are characterized not only by their durability but also by an impressive current-carrying capacity of 120A. This ensures that connections are safe and efficient, contributing to the stability and effectiveness of the entire energy system.
