

SolarEdge SE-MTR-3Y-400V-A

Product code: AF.licznik.solaredge.04

The SolarEdge SE-MTR-3Y-400V-A is a modern device designed for monitoring energy consumption in three-phase installations with a 400V voltage. This is an ideal solution for commercial and residential use, allowing precise tracking of energy consumption and production. The meter works seamlessly with SolarEdge systems, providing detailed data on energy flow, enabling better management of photovoltaic installations and increased energy efficiency.

Product description

SolarEdge SE-MTR-3Y-400V-A Energy Meter

The SolarEdge SE-MTR-3Y-400V-A is a modern device designed for monitoring energy consumption in three-phase installations with a 400V voltage. This is an ideal solution for commercial and residential use, allowing precise tracking of energy consumption and production. The meter works seamlessly with SolarEdge systems, providing detailed data on energy flow, enabling better management of photovoltaic installations and increased energy efficiency.

Key Features:

- Three-phase energy meter
- Compatible with SolarEdge inverters
- Nominal voltage: 400V
- Accurate monitoring of energy consumption and production
- Remote data reading and integration with SolarEdge monitoring systems
- Ideal for commercial and industrial installations

The SE-MTR-3Y-400V-A meter ensures reliable operation, and its integration with the SolarEdge system allows full control over the efficiency of the photovoltaic installation.
